ЕВОЛЮЦІЯ ТЕХНОЛОГІЙ

Науковий керівник: доцент, канд. пед. наук Баб'як Ж.В.

Ключові слова: еволюція технологій , технології;

Keywords: evolution of the technology , technology;

Technological revolution experienced great changes. It is of importance for modern society. That is why Evolution of Technology is the problem of our investigation.

As a result of large number of the new inventions, many branches of the economy gradually have stopped their work. The consequences of this restructuring, escalated into a crisis of 28 years and the next few waves of crisis, which initially covered the United States, and then the whole world. And all that terminated with the end of the World War II. Now many branches of the economy are ceasing their existence, as we are moving to a completely different model of the world.

The cost of moving, reproduction, copying and production of their own information are reduced to zero. It means that everyone should create and extend the information on the global scale. And we will encounter with a big changes.

We are in the middle of the process now, and we think that it is not so important, but we just do not understand the whole scope of changes.

All of what humanity gets used is rooting in the past. Now in the world of social communications many mechanisms that are relied by humanity are stop working.

In the near future we will face with a multitude of things that we can not control.

In particular, among them are: 3D printers and 3D print. When I hear that 3D printers can print 3D printers, I understand that you can print everything. Now everyone is worried about weapons printing on 3D printer. But I can assure you that this is not the worst thing that we can expect. In 10 years we will have the opportunity to print DNA of the organisms we need. And it means that biological weapons can be reproduced practically in domestic conditions.

Internet is destroying many things usual for people. Nowadays traditions of business model are breaking down. A lot of economists consider this trend is so dangerous. For thousands of years the business was based on the model of the information inequality: seller always knew more, than the buyer.

Also among of the inventions that can radically change human life are: breakthrough Internet in their vehicles (the driver can communicate with other drivers through a regular monitor), Google Glass (which can help you to know more information about the object), Google Automobile (that can drive without a driver).

But the Internet creates difficulties for humanity. Everyone sees it differently. And it has a different effect on each of us.
