Mainstreaming of information and communication technologies' application as precondition for successful implementation of Ukrainian micro-regions public projects: scientific approach

Objective need to intensify the use of information and communication technologies as a prerequisite for the successful implementation of Ukrainian micro-region public projects was defined. Advantages of using this type of technologies for both micro-regions and general public were exemplified. Positioning and consideration such townships as Vyshnivets (Zbarazh district, Ternopil region, Ukraine) as micro-region was proved. Importance and benefits of applying of two-level and multi vector models of communication as well as arguing communication one by township council and its Chairman were specified. Particular actions as identification of existing problems, formulation and implementation of local policy-making, monitoring and public control over their realization, which enable the removal of barriers for such townships as Vyshnivets to develop into micro-region.

Events in which it is advisable to implement the steps were designated. Obstacles preventing public authorities from attraction of the public for the activities were systematized and it was concluded that the removal of these obstacles should be done through active use of information and communication technologies. An advantage of using computer and information technologies in the system of administration of local authorities was featured as well as the functional load of these technologies was revealed. The need was acknowledged and directions for activation of using information and communication technologies as a prerequisite for the successful implementation of public projects by the township of Vyshnivets as micro-region in a dynamic environment were proposed.

Identyfikacja interesariuszy w projektach infrastrukturalnych

Interesariusze projektu infrastrukturalnego stanowią zazwyczaj bardzo dużą grupę podmiotów, które mogą znacząco wpływać na realizację projektu na różnych jego etapach realizacji. Dlatego w celu efektywnego zarządzania całym projektem niezbędne jest prowadzenie na potrzeby projektu analizy interesariuszy, której pierwszym etapem jest identyfikacja interesariuszy. Warunkiem poprawności dalszych działań w ramach analizy interesariuszy jest ten pierwszy etap analizy
